REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

The prior art of record to a unilimb respiratory circuit (a tube within a tube circuit) comprising, inter alia, a first conduit and a second conduit, wherein the first conduit and the second conduit comprises pleated tubing, wherein axial extension or contraction of the distal end of the second conduit causes a corresponding axial extension or contraction of the distal end of the first conduit, wherein upon axial extension of the distal end of the second conduit from a first compressed axial conformation to a second expanded axial conformation (or vice versa), the second conduit will retain the second expanded axial conformation, and wherein the first conduit will expand or contract in length with corresponding axial expansion or contraction of the second conduit.

The prior art to Suzuki fails to teach a unilimb circuit that is able to retain its length when manipulated from a first conformation to a second conformation. That is, the corrugated tubing of Suzuki flexes instead of retaining its length.

As for the prior art to Clawson, the applicant's arguments on page 5-7 of the Remarks, as well as Declaration under 37 CFR 1.132 has been found persuasive. The nozzle 100 of Clawson is used for high frequency pulse respiration, which does not allow for spontaneous ventilation (non-assisted ventilation).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
